## CONTENTS OF VOLUME 89

NUMBER 1, AUGUST 1990

DANIEL P. RALEIGH, ANDREW C. KOLBERT, AND ROBERT G. GRIFFIN. The Effect of Experimental Imperfections on TOSS Spectra .....	1
WILLY GOMBLER, HORST LANGE, AND DIETER NAUMANN. A $^{113}\text{Cd}$ , $^{19}\text{F}$ , and $^{13}\text{C}$ NMR Study on Perfluoroorganocadmium-Diglyme Adducts .....	10
N. BANSAL AND C. DYBOWSKI. Using Xenon-129 NMR Spectrometry to Measure Diffusivity of Water in Microporous Y Zeolites .....	21
PETER C. M. VAN ZIJL, CHRIT T. W. MOONEN, AND MARKUS VON KIENLIN. Homonuclear $J$ Refocusing in Echo Spectroscopy .....	28
GAMALIEL ISAAC, MITCHELL D. SCHNALL, ROBERT E. LENKINSKI, AND KATHERINE VOGELE. A Design for a Double-Tuned Birdcage Coil for Use in an Integrated MRI/MRS Examination .....	41
TAI-SUNG LEE AND LIAN-PIN HWANG. Influence of Dipole-Dipole Cross-Relaxation on Spectral Lineshapes of Methyl Protons in Inversion-Recovery Experiments .....	51
DAN GAMLIEL AND JACK H. FREED. Theory of Two-Dimensional ESR with Nuclear Modulation .....	60
ZSOLT ZOLNAI, SLOBODAN MACURA, AND JOHN L. MARKLEY. Phasing Two- and Three-Dimensional NMR Spectra by Use of the Hilbert Transform Can Save Computer Time and Space .....	94
DIKOMA C. SHUNGU, DOUGLAS C. BUSTER, AND RICHARD W. BRIGGS. $^{23}\text{Na}$ Magnetization-Transfer NMR Studies of Concentration and Temperature Dependence of Ionophore-Induced Equilibrium Exchange of $\text{Na}^+$ across Prototypical Cell Membranes .....	102
YU. A. STRELENKO, V. N. TOROCHESHNIKOV, AND N. M. SERGEYEV. Isotope Effects in the NMR Spectra of Nitromethane .....	123

### NOTES

I. S. PODKORYTOV. Seven-Pulse Sequence DEPT-INADEQUATE .....	129
A. C. KOLBERT, D. P. RALEIGH, R. G. GRIFFIN, AND M. H. LEVITT. Spinning Sideband Enhancement Using a Rotary Resonant Field .....	133

JOSEPH GRANOT, JOSEPH BEN MAIR, L. ARRIVE, Y. MENU, N. MARTIN, AND H. NAHUM. Volume-Localized $^{31}\text{P}$ Spectroscopy via Combined Selective Presaturation and Selective Excitation .....	139
H. R. BIRCHER, C. MÜLLER, AND P. BIGLER. Improvements for the 1D HOHAHA Experiment .....	146
ALEX D. BAIN. The Choice of Parameters in an NMR Experiment. Ap- plication to the Inversion-Recovery $T_1$ Method .....	153
ELISABET BERGGREN AND PER-OLOF WESTLUND. A Theoretical NMR Lineshape Study of the Influence of an Angle-Dependent Relaxation of the Anisotropic Site in Two Chemical-Exchange Models .....	161
GRAHAM TOWN AND DOV ROSENFIELD. Analytic Solutions to Adiabatic Pulse Modulation Functions Optimized for Inhomogeneous $B_1$ Fields	170
 COMMUNICATIONS	
JEREMY J. TITMAN, ADRIAN L. DAVIS, ERNEST D. LAUE, AND JAMES KEELER. Selection of Coherence Transfer Pathways Using Inho- mogeneous Adiabatic Pulses. Removal of Zero-Quantum Coherence	176
C. CIESLAR, T. A. HOLAK, AND H. OSCHKINAT. 3D TOCSY-TOCSY Processing Using Linear Prediction, as a Potential Technique for Automated Assignment .....	184
JEAN-PIERRE SIMORRE AND DOMINIQUE MARION. Acquisition Schemes and Quadrature Artifacts in Phase-Sensitive Two-Dimensional NMR	191
PING XU, XI-LI WU, AND RAY FREEMAN. Separation of Overlapping Cross Peaks in NMR Correlation Spectroscopy .....	198
ROBERT TYCKO, GARY DABBAGH, JAMES C. DUCHAMP, AND KURT W. ZILM. Carbon-13 Zero-Field NMR in High Field .....	205
OLE W. SØRENSEN. Aspects and Prospects of Multidimensional Time- Domain Spectroscopy .....	210
 MEETINGS AND ANNOUNCEMENTS .....	217
 NUMBER 2, SEPTEMBER 1990	
CZESŁAW J. LEWA AND MARIA LEWA. Temperature Dependence of $^1\text{H}$ NMR Relaxation Time, $T_2$ , for Intact and Neoplastic Plant Tissues .....	219
L. GONZÁLEZ-TOVANY AND V. BELTRÁN-LÓPEZ. Second-Order Powder Pat- tern and Simulated Spectra of EPR Transitions in Orthorhombic Sym- metry or NMR with Quadrupole Interactions .....	227

IVANO BERTINI, CLAUDIO LUCHINAT, AND KASHYAP V. VASAVADA. The Effect of Magnetic Anisotropy on the Longitudinal Nuclear Relaxation Time in Paramagnetic Systems .....	243
DOUGLAS E. BROWN AND THOMAS W. CAMPBELL. Enhancement of 2D NMR Spectra Using Singular Value Decomposition .....	255
JOHN HOMER AND JOHN K. ROBERTS. Routine Evaluation of $M_0$ Ratios and $T_1$ Values from Driven-Equilibrium NMR Spectra .....	265
SUZANNE L. DUCE, LAURANCE D. HALL, AND TIMOTHY J. NORWOOD. High-Resolution Heteronuclear NMR Spectroscopy in an Inhomogeneous Magnetic Field .....	273
A. HEUER. A New Method for an Automatic Analysis of Rotation Patterns	287
Y. WU, B. Q. SUN, A. PINES, A. SAMOSON, AND E. LIPPMAA. NMR Experiments with a New Double Rotor .....	297
JÜRGEN LINK AND JOACHIM SEELIG. Comparison of Deuterium NMR Imaging Methods and Application to Plants .....	310
J. J. VAN VAALS AND A. H. BERGMAN. Novel High-Frequency Resonator for NMR Imaging and Spectroscopy .....	331
K. D. MERBOLDT, D. CHIEN, W. HÄNICKE, M. L. GYNGELL, H. BRUHN, AND J. FRAHM. Localized $^{31}\text{P}$ NMR Spectroscopy of the Adult Human Brain <i>in Vivo</i> Using Stimulated-Echo (STEAM) Sequences .....	343

## NOTES

K. H. TSAI, T. E. GLASS, AND H. C. DORN. Dipolar-Dominated $^{29}\text{Si}$ Dynamic Nuclear Polarization Overhauser Enhancements for Hexamethyldisiloxane .....	362
ROBERT W. DYKSTRA. Implementation of Nanosecond Radiofrequency Commutation for NMR Spectroscopy .....	367
G. J. BOWDEN AND J. KHACHAN. A Simple Check for Nuclear Evolution Tables .....	372
REINHARD BENN, HILTRUD GRONDEY, AND ULLRICH KÖLLE. Editing of the CP/MAS Spectra of the Isomers of $[(\eta^5\text{-Me}_5\text{Cp})\text{Cl}_2\text{Ru}]_2$ via $T_1(\text{H})$ Difference Spectroscopy .....	375
DONALD S. WILLIAMS AND IRVING J. LOWE. Elimination of the Effects of Magnetic Field Inhomogeneities to the Measurement of RF Excitation Profiles by Using Double Gradient Reversals .....	378
EUN KEE JEONG, J. H. WALTON, MONTEE A. DOVERSPIKE, AND MARK S. CONRADI. Spin-Rotation Relaxation in Rotor Solid KCN .....	381

JANE M. WITHKA, S. SWAMINATHAN, AND PHILIP H. BOLTON. NOEs in Duplex DNA Depend on Orientations of Internuclear Vectors to the Symmetry Axis .....	386
A. DEAN SHERRY, CRAIG R. MALLOY, F. MARK H. JEFFREY, FLAVIO CHAVEZ, AND HILARY K. SRERE. Formation of Carbamates of Tau- rine and Other Amino Acids during Neutralization of Tissue Extracts with Potassium Carbonate/Bicarbonate .....	391

#### COMMUNICATIONS

K. TAKEGOSHI, SAKAE TSUDA, AND KUNIO HIKICHI. Practical Imple- mentation of the Self-Refocused 133I Solvent-Suppression Sequence .....	399
GERHARD WIDER. Elimination of Baseline Artifacts in NMR Spectra by Oversampling .....	406
DOUGLAS C. MCCAIN AND JOHN L. MARKLEY. Distinguishing Chloro- plast Water from Nonchloroplast Water in One-Dimensional NMR Microscope Images of Plant Leaves .....	410
P. J. HORE, D. S. GRAINGER, S. WIMPERIS, AND G. J. DANIELL. Suppres- sion of <i>J</i> Cross Peaks in NOESY Spectra by the Maximum-Entropy Method .....	415
GOTTFRIED OTTING, LEONARD P. M. ORBONS, AND KURT WÜTHRICH. Suppression of Zero-Quantum Coherence in NOESY and Soft NOESY .....	423
PETER B. BARKER, DIKOMA C. SHUNGU, AND JOSEPH S. SCHOENIGER. Mode-Switched Radiofrequency Coils .....	431

NUMBER 3, OCTOBER 1, 1990

GADI GOELMAN, V. HARIHARA SUBRAMANIAN, AND JOHN S. LEIGH. Trans- verse Hadamard Spectroscopic Imaging Technique .....	437
N. CHANDRAKUMAR, R. RAJAN, AND G. V. VISALAKSHI. Off-Resonance Ef- fects on Coherence Transfer in Homonuclear Spin-Lock Experiments .....	455
WEIGUO ZHANG AND PAUL VAN HECKE. The Effects of RF Phase Shifts and Instabilities Caused by Carrier Frequency Switching in Localized NMR Spectroscopy .....	461
PAUL D. MAJORS, J. L. SMITH, F. S. KOVARIK, AND EIICHI FUKUSHIMA. NMR Spectroscopic Imaging of Oil Displacement in Dolomite .....	470
TERRY GULLION, DAVID B. BAKER, AND MARK S. CONRADI. New, Com- pensated Carr-Purcell Sequences .....	479

JAMES S. HYDE, ROBERT J. RILLING, AND A. JESMANOWICZ. Passive Decoupling of Surface Coils by Pole Insertion .....	485
LEWIS E. KAY, MITSUHIKO IKURA, ROLF TSCHUDIN, AND AD BAX. Three-Dimensional Triple-Resonance NMR Spectroscopy of Isotopically Enriched Proteins .....	496
SAMUEL J. GRAVINA AND PHILLIP J. BRAY. Nuclear Quadrupole Resonance of Boron in Borate Glasses .....	515
GRETA VANDEMAELE, ANITA BUEKENHOUDT, AND LIEVEN VAN GERVEN. A New Field-Cycling NMR Method for Determining the Spin Conversion Time at Low Tunnel Frequencies .....	522
ERIK R. P. ZUIDERWEG. Analysis of Multiple-Pulse-Based Heteronuclear <i>J</i> Cross Polarization in Liquids .....	533
KLAUS-PETER NEIDIG, RAINER SAFFRICH, MICHAEL LORENZ, AND HANS ROBERT KALBITZER. Cluster Analysis and Multiplet Pattern Recognition in Two-Dimensional NMR Spectra .....	543
GYULA BATTA AND KATALIN E. KÖVÉR. Heteronuclear Correlations by Multiple-Quantum Evolution. II. Proton-Proton "Decoupling" and Multiplicity Labeling in a Constant-Time Experiment Using Carbon Detection	553
NOTES	
R. KUMARESAN, C. S. RAMALINGAM, AND D. VAN ORMONDT. Estimating the Parameters of NMR Signals by Transforming to the Frequency Domain .....	562
A. CABRAL-PRIETO, H. JIMÉNEZ-DOMÍNGUEZ, L. GONZÁLEZ-TOVANY, S. GALINDO, H. FLORES-LLAMAS, AND M. TORRES-VALDERRAMA. Deconvolution of the Gaussian-Convolved Lorentz EPR Lineshape .....	568
PETER A. MIRAU, SHARON A. HEFFNER, AND FRANK A. BOVEY. Three-Dimensional Nuclear Overhauser Effect/ <i>J</i> -Resolved Spectroscopy .....	572
RUTH PACHTER, RUSS B. ALTMAN, AND OLEG JARDETZKY. The Dependence of a Protein Solution Structure on the Quality of the Input NMR Data. Application of the Double-Iterated Kalman Filter Technique to Oxytocin .....	578
HENGYI SHEN AND FLEMMING M. POULSEN. Toward Automated Determination of Buildup Rates of Nuclear Overhauser Effects in Proteins, Using Symmetry Projection Operators .....	585
T. P. L. ROBERTS, T. A. CARPENTER, AND L. D. HALL. Design and Application of Prefocused Pulses by Simulated Annealing .....	595
THOMAS G. NEISS AND JAMES E. ROBERTS. Selected Observation of <sup>1</sup> H NMR Resonances from Rotating Solids .....	605

MICHAEL G. ZAGORSKI. How to Obtain Accurate CAMELSPIN or ROESY Spectra with Identical Low-Power Pulses for Both the Preparation and the Mixing Intervals . . . . .	608
<b>COMMUNICATIONS</b>	
BAS R. LEEFLANG AND JOHANNES F. G. VLEEGENTHART. Relayed NOE Experiments for Discrimination of Exchange Effects of Overlapping Labile Protons . . . . .	615

AUTHOR INDEX FOR VOLUME 89 . . . . .	659

#### NOTICE

The Subject Index for Volume 89 will appear in the December 1990 issue as part of a cumulative index for the year 1990.

## Information for Authors

The *Journal of Magnetic Resonance* includes papers dealing with the theory, techniques, methods of spectral analysis and interpretation, spectral correlations, and results of magnetic resonance spectroscopy and related fields. The Editor seeks the assistance of expert referees in the evaluation of manuscripts of articles, but he alone is responsible for the final decision concerning acceptance.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Magnetic Resonance* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

**A signed photocopy of the copyright assignment form which appears following this "Information" should be submitted to the Editor along with each manuscript. (This form will not be binding if the manuscript is not accepted for publication in the *Journal of Magnetic Resonance*.)**

Fifty reprints of each paper are supplied without charge, and additional reprints may be ordered on a form that is sent to the authors with the proofs that the authors receive. The journal *assesses no page or publication charges*.

Manuscripts and books for review should be sent to the Editor, Wallace S. Brey, Department of Chemistry, University of Florida, Gainesville, Florida 32611-2046.

### Communications and Notes

Communications are preliminary accounts of work which, in the Editor's judgment, merit expedited publication because of special novelty or general interest. A Communication must be especially carefully prepared. Since it may not be refereed and the author will not receive galley proofs for correction, it is the responsibility of the author to ensure that the manuscript as submitted is free of typographical or substantive errors. The length of a Communication should be no more than that corresponding to five printed pages. Notes are complete accounts of work of limited scope.

Communications and Notes require no abstract and are not divided into sections.

### Form of the Manuscript

Manuscripts should be submitted in triplicate. The original typewritten copy should be supplied; printout from a computer is acceptable only if it is of "letter quality." All typing must be double-spaced, including references, footnotes, and figure captions, on one side of paper approximately 22 × 28 cm (8.5 × 11 in.). Each page of the manuscript should be numbered. If the paper is lengthy, it may be divided into sections, but the sections should not be numbered. The first line of each paragraph is indented.

**Cover Page.** The first page contains the article title, the author's name, the laboratory where the work was done, and the address of the laboratory. At the bottom of this page should appear any footnotes to the title (indicated by superscript \*, †, ‡).

*Abstract.* The second page of the manuscript for each regular paper should contain an abstract of 50–200 words, summarizing the nature and results of the research described. The abstract must be completely self-contained, having no references to items appearing in the body of the manuscript.

*Equations, Symbols, and Abbreviations.* Mathematical equations and symbols must be typewritten wherever possible. Equation numbers are given in *square brackets* to the right of the equation, and references in the text to equations should be in the form “Eq. [3].” Greek letters may be identified in pencil in the margin. Other nonstandard mathematical symbols should be clearly identified, in a separate list if necessary. Symbols for vectors and tensors should be clearly marked. The American Chemical Society’s *Style Guide*, 1986, or the *Style Manual of the American Institute of Physics* should be consulted for standard abbreviations, names, and symbols for units, as well as for important suggestions about grammar, style, and usage.

*References.* Literature references are cited in numerical order in the text by *in-line, parenthesized, italic numerals*. References to “unpublished” or “to be published” work from the author’s laboratory should not be given. However, papers actually accepted may be referred to as “*in press*” if the name of the journal is included.

The references themselves are to be typed double-spaced on a separate sheet in numerical order. Each reference contains the author’s initials, last name, journal name, volume, initial page number, and year in parentheses, *in that order*. The name of the journal is abbreviated in the style of *Chemical Abstracts Service Source Index*, 1985. For book references, the form is author’s name, name of the book in quotation marks, editor’s name (if any), edition if other than the first, chapter or page number, publisher’s name, place of publication, and year of publication.

*Footnotes.* Authors are urged to give careful thought to the logical construction of the manuscript, so that explanatory or parenthetical footnotes need not be employed. Any footnotes which are indispensable are not intermixed with references, but are indicated in the text by consecutive, superscript numerals, and each footnote will then appear in the print at the bottom of the page on which it is cited. In the manuscript, any footnotes to be included are gathered together in numerical order on a separate page.

*Tables.* Tables are numbered consecutively with Arabic numerals and are mentioned in order in the text. Each table should be laid out carefully, so that minimum space is used and entries are accurately grouped and clearly labeled. Usually, a table should be arranged vertically, with more rows than columns. Vertical lines are not used to separate the columns. Each table is provided with a title and typed on a separate sheet of paper. Footnotes to the tables are placed directly below it and are indicated by superscript, lowercase, italic letters (<sup>a,b,c</sup>).

*Figures and Diagrams.* Figures are numbered consecutively with Arabic numerals and are mentioned in order in the text. They must be carefully drawn in black, waterproof drawing ink, to draftsman’s standards, with lettering by stencil or drawing machine. Freehand, penciled, or typewritten lettering is not acceptable. Lettering should include numerical scales and units for the two axes, and should be large enough to be legible after reduction of 50–60%. Legends are to be typed together on a separate sheet. Small figures must be mounted on sheets of full manuscript page size. Larger originals must be photographically reduced to page size and glossy high-contrast prints of this size must be supplied by the author. The original and two duplicates of each figure are required. Ink drawings should also be supplied for complex molecular formulas or diagrams which the printer cannot readily set in type. Illustrations in color can be accepted only if the authors defray the cost.
